

BLUSYNC

**MORE COLLABORATION.
MORE PRODUCTIVITY.
MORE SECURITY.**

Replace legacy SecureFTP
based solutions with an
Enterprise class alternative

DATASHEET

Change the way your employees collaborate.

BluSync is a hybrid file sharing and collaboration application for the agile enterprise. With military grade security and privacy, BluSync puts innovation and productivity on the fast track without the worry about where employees store their digital assets.

BluSync enables your employees to collaborate seamlessly among themselves and also with external parties across locations, while allowing access across multiple devices, so business gets done on the go. BluSync supports a concept called mini-clouds, allowing groups of users to collaborate effectively. BluSync leverages BluKrypt™ - our private storage container technology - to make the solution unmatched in terms of security, privacy and control when deployed in public or hybrid cloud configurations. BluSync is cloud/storage agnostic and works with several popular cloud storage providers seamlessly.

Secure share & sync

Easy sharing anytime, anywhere. Sharing a file with a colleague or someone outside your organization is literally just a click away. BluSync generates a link that you can copy into an email to send, or will even send the email for you. Worried that the link may end up in the wrong hands? No problem. Parablu gives you policy based sharing with password protection, read-only access, and even allows expiration of document links.

Replace SecureFTP based solutions

SecureFTP based home-grown solutions held together with scripts can be a thing of the past. Whether it is sharing a single file or ongoing collaboration – BluSync handles it effortlessly. You can automate business processes by having files deposited into pre-determined locations. BluSync will know to auto-share / route the file to the right collaborators based on the folder it is placed in.

Universal access across multiple devices

When you use Parablu, your business data goes with you. On all the devices you have BluSync installed, it keeps your data in sync and up to date all the time. Even on devices where you don't have it installed, you can securely access the files over the Internet.

Mini-clouds

You can create mini-clouds for different teams inside your business. So, every team and every individual gets to see only the data you want them to see.

Remove cloud storage restrictions

BluSync overcomes several limitations that file storage services in the cloud may impose. Filename, path size and special character limitations placed by services such as Microsoft OneDrive for Business can now be a thing of the

Comprehensive endpoint support

Supports your employees no matter which operating system they like to use on their endpoints. BluSync has built in support for both Windows and MacOS endpoints.

Single sign-on

SSO eliminates password reset phone calls, protects against unauthorized access, and integrates with your enterprise's LDAP or Active Directory.

Special features

- Support for multiple clouds
- Deduplication
- Comprehensive endpoint support
- One-click secure sharing
- Search capability
- Support for browsers and agents
- Elastic architecture

ABOUT US

Parablu, an award winning provider of secure data management solutions, engineers new-age cloud data protection solutions for the digital enterprise. Our Privacy Gateway powered solutions protect enterprise data completely and provide total visibility into all data movement. Our suite of products include: BluKrypt - a Privacy Gateway that completely secures critical data on the cloud, BluVault - a powerful and secure data backup solution designed for the cloud, BluSync - a secure file sharing and collaboration solution for the agile enterprise, and BluDrive - a secure file transfer solution. These solutions easily integrate with your existing infrastructure making it a seamless solution for your enterprise data protection and management needs. Get a demo today.
