

**BLUVAULT
THE CLOUD'S GOT YOUR
BACK(UP). SAFER AND
MORE SECURE THAN
EVER.**

**Secure endpoint backups
designed for Office 365 users**

DATASHEET

Complete backup on the cloud with 100% security

BluVault is a powerful and secure data backup solution in the cloud. You can now move all your end-point and server backup to Microsoft's OneDrive for Business smoothly and with total data security. BluVault encrypts the data before it leaves your network making the security even more stronger. The hybrid deployment mechanism in BluVault lets you control what stays on-premise and what goes on to the cloud.

Any file, any folder

Parablu copies files to OneDrive, no matter where they live on the endpoint – not just the OneDrive folder. BluVault does not depend on the OneDrive Sync client. It integrates directly with Office 365 APIs.

Policy based management

Parablu's BluVault provides policy based management of several important enterprise parameters, such as user management, backup scheduling, file/folder inclusions and exclusions, file type selection and file type filters.

Security, privacy and confidentiality

BluVault, combined with BluKrypt, Parablu's Privacy Gateway solution, not only enables powerful encryption with fine grained access control, it also obfuscates files and folders completely, before writing data to OneDrive for Business, so you know your enterprise data is safe.

Overcome OneDrive Limitations

OneDrive is built on top of Sharepoint and is therefore quite different than other cloud storage targets. With BluVault you can overcome OneDrive limitations around file sizes, folder sizes, special characters and upload / download limits.

Self-service Interface

Offers the flexibility to be configured with administrator set policies or allow users to choose what to backup, discover how protected their files are and do their own restores. BluVault's easy-to-use interface means that users can initiate their own restores without requiring an administrator to get involved.

Backup server on-premise

Multiple Deployment Options

Install Parablu on-premise for a highly secure deployment, in the cloud for easy management, or in a hybrid mode to get the best of both options.

CPU Throttling

Allows administrators to control the impact the Parablu agent has on the endpoint by adjusting CPU usage levels up or down.

Partial file transfer

BluVault's backup agent can detect the modified content inside a file and send only changed data instead of the entire file on subsequent incremental backups.

Secure sharing

Files that you choose to share are stored securely in the cloud without compromising privacy or confidentiality. The solution is scalable to address vast geographical spread and large user bases. BluVault generates a link that you can copy into an email to send, or will even send the email for you. Worried that the link may end up in the wrong hands? No problem. Parablu gives you policy based sharing with password protection, read-only access, and even allows expiration of document links.

Network bandwidth optimization

BluVault helps you control data flow based on network availability with network throttling to limit usage of your valuable bandwidth.

Backup server in the cloud

File versions

Allows the backup administrator the option to maintain multiple file versions and control aging / retention of versions based on policy.

De-duplication & compression

Smart sub-file level de-duplication combined with data compression saves network bandwidth and valuable storage space.

Hybrid approach to serve users both inside and outside the office

Governance

All administrator actions, such as tracking progress and status of backups can be executed from an easy-to-use web portal interface.

AD & Azure AD Support

Integrate easily with enterprise namespaces, such as Active Directory and Azure Active Directory. AD and AAD can be used not just for authentication but also to provision and de-provision users.

Enterprise audit trail

The solution is completely auditable. All touch points on the system get audited automatically. Parablu's easy to use dashboard and granular reports make backup management a cinch.

Litigation hold

Allows administrators to assign special policies to identified users which align to Legal Hold requirements.

Single sign-on

SSO eliminates password reset phone calls, protects against unauthorized access and integrates with your enterprise's LDAP or Active Directory.

Global solution

BluVault can scale along with your business to multiple offices globally. BluVault works across different locations still allowing convenient and centralized policy administration. It is easy to build in redundancy and fail-over in the architecture to ensure that you have zero downtime.

ABOUT US

Parablu, an award-winning provider of secure data management solutions, engineers new-age cloud data protection solutions for the digital enterprise. Our Privacy Gateway powered solutions protect enterprise data completely and provide total visibility into all data movement. Our suite of products include: BluKrypt - a Privacy Gateway that completely secures critical data on the cloud, BluVault - a powerful and secure data backup solution designed for the cloud, BluSync - a secure file sharing and collaboration solution for the agile enterprise, and BluDrive - a secure file transfer solution. These solutions easily integrate with your existing infrastructure making it a seamless solution for your enterprise data protection and management needs. Get a demo today.
