

Protection for your data in
**EXCHANGE ONLINE,
SHAREPOINT ONLINE,
ONEDRIVE FOR BUSINESS
and TEAMS**

BluVault for Microsoft 365

The easiest and
reliable backup for
businesses

Complete backup on the cloud with 100% security

You've moved your data to Microsoft 365 and enabled greater collaboration for your distributed teams and achieved seamless accessibility to important data. That's great, but have you thought about the safety of this data? BluVault helps you backup your Microsoft 365 data – Exchange Online, SharePoint Online, OneDrive for Business, and Teams seamlessly to an alternate cloud target with total security and privacy.

SaaS data backups are an indispensable asset in any IT Administrator's toolkit. Whether it is to achieve regulatory compliance, protect against ransomware, defend against insider threats or just plain recover lost data – a cloud-cloud backup is an absolute necessity.

And that's where **BluVault for Microsoft 365** comes in.

Security, Privacy, and Confidentiality

BluVault combined with BluKrypt, Parablu's secure container technology not only enables powerful encryption but also enforces a strict separation of duties. It also obfuscates file and folder names completely as well as performs file shredding, before writing backup data to cloud storage targets. With BluVault, you know your enterprise data is safe.

Protection from Ransomware

BluVault is designed to protect you from ransomware attacks by ensuring that a copy of your data is always available to you – safe and secure. In case of an attack, you can simply point back to a point-in-time previous to the attack, and restore your data, and not be held hostage by the attacker.

Shared Responsibility Model

This is a fairly standard industry practice where Cloud vendors draw a clear line where their responsibilities stop. Generally, SaaS/Cloud vendors take responsibility for certain things like uptime, infrastructure, and network availability – but customers remain responsible for the data that they store in the cloud and its security.

You can learn more about Microsoft's Shared Responsibility Model [here](#).

Regulatory Compliance and Governance

BluVault helps organizations achieve regulatory compliance. Regulations like SOX, HIPAA, GDPR, and others have requirements around data protection and retention which BluVault can help meet. BluVault's reports and audit trail help to keep organizations on a defensible platform when it comes to regulatory compliance.

End-to-End Encryption

Zero-Knowledge Privacy is a tenet that all Parablu products are built on. This ensures that your data can be accessed only by you and nobody else – not the cloud vendor, not even us.

No Infrastructure Headaches

BluVault for Microsoft 365 is a cloud-cloud offering which means no on-premise infrastructure and no impact on your company's network bandwidth for daily backups. Just schedule it and forget it. You have other things to worry about!

But, if regulations require you to keep backup data on-premise, we can do that too!

Storage Vendor Agnostic

BluVault, like all of Parablu's solutions, is storage vendor agnostic and thus allows enterprises to backup data from Microsoft 365 to any other cloud target easily and avoid vendor lock-in. Choose from Microsoft Azure, Google Drive, Amazon S3, IBM SoftLayer, Google Cloud Platform, etc. Or you may opt for Parablu's fully managed and hosted model and relieve yourself of the burden of making these choices!

Historically Accurate

BluVault enables automatically scheduled backups that ensure that all historical versions of your Microsoft 365 data are safely stored and easily recoverable. Granular restores enable you to get back a single folder, document, email, file, or version of a file, as the case may be.

Policy-based management

Parablu's BluVault provides policy-based management that allows an administrator to easily control all elements of backup behavior – backup schedules, folders to include/exclude, file types to include/exclude, number of versions to retain, file size limits, user quota limits, etc. Once these parameters are set, all Microsoft 365 accounts pointed to the policy read these parameters, and change their backup behavior in a matter of a couple of hours.

Incremental backups forever

After BluVault performs a full sweep of your Microsoft 365 data the first time around, it only picks up changes after that. This, combined with our compression and de-duplication capabilities goes a long way towards conserving valuable network bandwidth and storage space.

Self-service Interface

BluVault includes options to inform end-users of the status of their backups, and even perform their own restores.

BluVault's easy-to-use interface means that users can initiate their own restores without requiring an administrator to get involved. The self-service nature is fully controllable by the administrator though and can be turned up and down based on the organization's appetite for self-service. Certain user groups can also be given more privileges than others.

Restores can be performed backup to the Microsoft 365 cloud or to their user endpoints for offline access.

Auditing and Reporting

Bluvault automatically audit logs all touchpoints in the system and provides several reports which can be scheduled to run automatically or generated automatically. The enterprise-class rigor, combined with granular insights makes backup management a cinch while helping you stay compliant.

Administrator Approved Deletion

BluVault allows an administrator to delete specific user files, emails, and folders from backup storage. This is critical for GDPR compliance and to satisfy users' *"right to be forgotten"*. All actions are audit-logged for compliance reasons.

AD and Azure AD Support

Integrate easily with enterprise namespaces, such as Active Directory and Azure Active Directory. AD and AAD can be used not just for authentication and SSO but also to provision and de-provision users on an ongoing basis

Litigation hold

With BluVault for Microsoft 365, administrators can assign special policies to identified users which align to Legal Hold requirements.

Powerful eDiscovery features

Search and find what you need in a matter of seconds. Powerful search features enable eDiscovery for legal or other needs. Search by filename or keyword. Or, in the case of Exchange Online, search using To:, From:, Subject:, combined with keywords.

Delegated Administration capability

BluVault allows administrative roles with limited permissions to be assigned to selected users to allow them to perform specific administrative operations.

Don't be limited by Microsoft's limits

Don't keep all your eggs in one basket! You don't have to be held hostage ever. Always have a vendor-neutral copy of your data in an alternate cloud. And don't let limitations imposed by your Microsoft 365 license affect the amount of data you retain. With BluVault you can rest free knowing that a copy of your data is always accessible, irrespective of storage or mailbox size limits imposed by your SaaS license.

Don't be limited by Microsoft's limits

Don't keep all your eggs in one basket! You don't have to be held hostage ever. Always have a vendor-neutral copy of your data in an alternate cloud.

About Parablu

Parablu, an award-winning provider of secure data management solutions, engineers new-age cloud data protection solutions for the digital enterprise. Our Privacy Gateway powered solutions protect enterprise data completely and provide total visibility into all data movement. Our suite of products include - **BluKrypt** - a Privacy Gateway that completely secures critical data on the cloud, **BluVault** - a powerful and secure data backup solution designed for the cloud, **BluSync** - a secure file sharing and collaboration solution for the agile enterprise, and **BluDrive** - a secure file transfer solution. These solutions easily integrate with your existing infrastructure making it a seamless solution for your enterprise data protection and management needs.
